

SANS Comes to Davis Starting March 10th

Security 507: Auditing Networks, Perimeters & Systems with Greg Loge

SANS Audit 507, Auditing Networks, Perimeters and Systems course is the end product of over one hundred skilled system, network and security administrators working with one common goal: to improve the state of information security.

This course, like all SANS courses, is based on known and validated threats and vulnerabilities. These threats and vulnerabilities are explained based on validated information from real world situations that can be used to raise awareness within an organization and build an understanding of why auditing is important. From these threats and vulnerabilities, we build the countermeasures and defenses including instrumentation, metrics and auditing.

This course includes hands-on exercises with demonstrated tools. Each student is invited to bring their own Windows 2000 or higher laptop for use during class. The hands-on exercises will allow you to experiment with the audit tools discussed in class and perform audit. A great audit is more than marks on a checklist; it is the understanding of the best practices, system analysis and forensics. Sign up for this course and experience the mix of theory and hands-on, pragmatic knowledge.

To Register or Get Additional Information on this course:

Visit the SANS website at: <http://www.sans.org/info/36788>

Course Location:

Hallmark Inn
110 F. Street
Davis, CA 95616

Group Discounts:

SANS is pleased to offer two (2) or more Students who work at the same organization, a Group Discount tuition fee. To obtain the discounted Registration Code offered for this course, contact mentor@sans.org PRIOR to registering and provide the names and e-mail addresses of all the students registering.

The SANS Auditing Networks, Perimeters and Systems course will run for 10 weeks and is divided into 7 sections:

- SANS and GIAC Certification Overview
- Auditing Principles and Concepts
- Auditing the Perimeter
- Network Auditing Essentials
- Auditing Web-Based Applications
- Advanced Systems Audit Windows XP/2000/2003
- Advanced Systems Audit: Unix

SANS Audit 507, Auditing course is designed for audit professionals looking for technical details on auditing, security professionals newly tasked with Audit responsibilities, and System and Network Administrators looking to better understand what an auditor is trying to achieve, how they think and how to better prepare for an audit. The goal of this course is to allow you to identify report on and reduce risk in your enterprise.

SANS

SANS Mentor Program
Mentor is SANS' program for learning our courseware in ten-weekly classroom sessions right in your home town. Mentor gives you time to absorb and master the same material commonly taught at SANS six-day conferences, with the guidance of a trained network security professional. For more information on the SANS Mentor program, go to <http://www.sans.org/mentor/about.php>

SANS makes every effort to help you obtain certification.

Mentor bio

Greg Loge: For the past 8 years Greg Loge has led IT organizations, consulted for large public and private clients, and played a hands on role in the design, configuration, and security of a range of IT systems. Through this he has held positions as a Chief IT Officer, consultant, system administrator, and IT director. Greg has an MBA with an emphasis in Finance and IT as well as being a Certified Information Systems Security Professional (CISSP) and a GIAC certified Systems and Network Auditor (GSNA). This unique combination of hands on technical security experience coupled with formal business education give him a strong background in tying the risk posed by insecure systems and practices to the business impacts on the organization. Greg is excited about the opportunity to share his experience and learn for yours!
